Or

Art Unit: 2837

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 line 2 is a negative claim limitation "current does not traverse said zero point", negative limitation that renders claim indefinite because it attempts to claim the invention by excluding what the inventor did not invent rather than distinctly and particularly point out what they did invent.

Claim 12 line 3 there is a parentheses after motor, needs to be deleted.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1,2,7,8,10-12,19 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 2002-171606 as cited by applicant in view of Sakuma et al. JP 2002-171606 discloses a motor drive apparatus comprising inverter driving a motor, #40 and #2, voltage converter including switching element and a reactor and convert dc voltage, see #49, #7, #5 and control circuit #48 to stop switching element from

Application/Control Number: 10/538,068 Page 3

Art Unit: 2837

switching. JP 2002-171606 lacks disclosing reactor's current traverses a zero point.

Sakuma et al discloses to stop said switching element from switching when reactors current traverses a zero point, see col 7 lines 35-45. IT would have been obvious to one of ordinary skill in the art to combine the motor drive apparatus of JP2002-171606 with reactor current traversing zero point and switching element for operating efficiency.

- 5. Claims 3-6,9,13 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. Claims 14-18,20,21 allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to karen masih whose telephone number is 571-272-2068. The examiner can normally be reached on m-f 8.30-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, david martin can be reached on 571-272-2800 ext 41. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
